

LANtek's 30,000 square foot facility has space for storage

LANtek's Recovery, Recycling and Revenue Sharing Plan:

- Equipment pickup nationwide
- Data security: sanitized hard drives
- HIPPA compliance
- Removal of asset tags
- Reconfiguration and resale of useable units
- Older equipment can be offered for resale to your employees for their own use.
- Donations made in your name to charitable organizations
- Revenue from used products sales is returned in part to you, and used to cover the costs of certified disposal of hazardous materials
- Disposal of hazardous materials using Certified Disposal Centers

Other LANtek Services:

LANtek is a value-added reseller. We sell, configure and install networks, new pc equipment, and offer maintenance contracts and hardware repair for your currently installed equipment.

LANtek's Asset Recovery and Disposal Services

LANtek is a value-added reseller of computer products, located in Kutztown, PA. Our Asset Recovery division is focused on the internal redeployment, remarketing, retirement, and the charitable donation (on behalf of your company) of PCs and microcomputer equipment and associated peripherals. LANtek's Asset Recovery and Disposal programs are designed to address your security needs while protecting your company from the potential legal issues involved with disposal of hazardous wastes.

Older equipment is repaired and sold with a 30 day warranty

The Problem

According to the Gartner Group, providing independent research and analysis for the information technology industry, approximately 100 million personal computers will be retired in the next three years. Unmanaged computer retirement will cost a company with 5,000 computers more than \$1 million annually.

Asset Retirement

In addition from shielding your company from the risks associated with computer asset disposal, LANtek is focused on maximizing the return to your organization for its retired assets. LANtek can help your organization move large volumes of assets into the secondary market. Our program will remarket your used micro computer

equipment to employees, third parties and charities of your choice. Those assets with no market value will be disposed of according to the prevailing EPA and local guidelines.

More importantly, LANtek will safeguard your confidential corporate information by sanitizing hard drives using procedures recommended by the Department of Defense.

Corporate Data Security and Confidentiality

While more and more companies are taking steps to protect confidential information through the use of firewalls, document shredders, passwords and anti-virus software, few worry about the computers and hard drives where this sensitive information is stored. Many believe that change to the F disk or reformatting the hard drive will completely remove sensitive data. It does not. LANtek uses a special software program to protect your corporate data and insure HIPPA compliance. Our service includes wiping all information and software resident on the hard drive, thereby shielding your corporation from confidential data loss and software piracy issues.

Hard drives are wiped, OS reinstalled before sale.

Off-Lease Equipment Verification Services

For companies who lease their corporate technology assets, LANtek can perform lease verification services of the inventory. LANtek tests and cleans the units, wipes hard drives, and provides a serialized inventory of your off-lease

assets, then returns these assets to your lessor. LANtek also offers repair services, handles the return of damaged goods, and helps prevent unnecessary charges and buy-outs at the end of your lease.

Environmental Disposal

Assets that fail LANtek's testing procedures and have no value will be disposed of according to EPA and RCRA (U.S. Resource and Recovery Act) guidelines. Clients are provided a complete serialized inventory listing and a Document of Liability Transfer that absolves your company from any environmental liability associated with these assets.
